Hyper automation

Power Automate Desktop

Low-code development environment

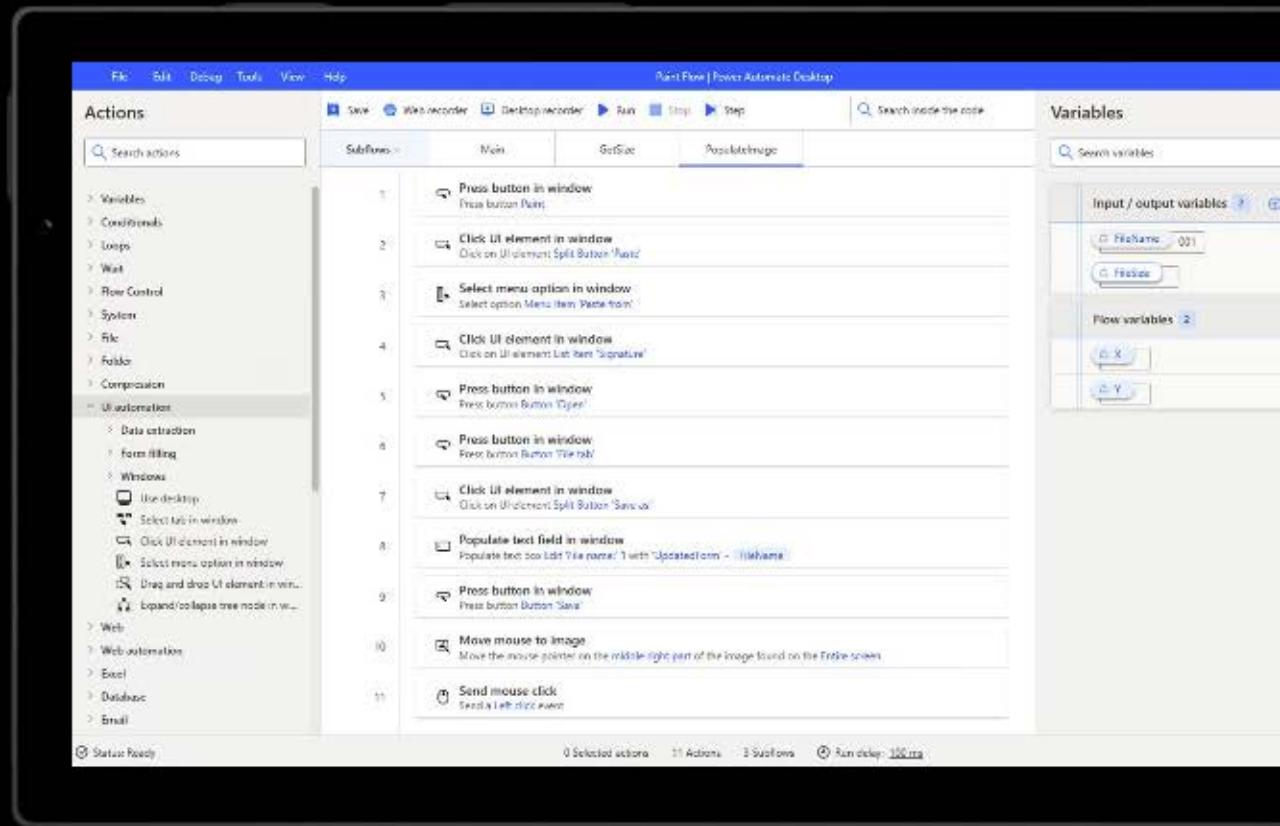

Diverse set of connectors to many different systems, such as productivity apps

Business systems from SAP, legacy terminals, Java apps, to Citrix

Parallel execution and multi-tasking on the same machine

Exception handling to enable automation of complex cases that require validation

Integration with the Power Automate cloud service for end-to-end scenarios

SAP + Power Automate

Native SAP data connectors enable API integration

Native SAP GUI Automation ensures nothing goes untouched

Governance and use cases for SAP related scenarios that leverage the full Power Platform

Extensive usage within Microsoft with massive cost savings & efficiency gains

RPA Playbook for SAP GUI Automation with Power Automate: API flows, UI flows, and Power Automate Desktop

Apostolis Papaioannou, Principal Program Manager, Wednesday, October 14, 2020

We're happy to announce the first enterprise automation playbook for Microsoft Power Automate.

In this playbook you will learn how to apply simple to advanced, no-code to pro-code SAP automation techniques, leveraging [Power Automate](#), [UI flows](#) and the recently announced public preview of [Power Automate Desktop](#).

Whether you just want to learn about Power Automate's enterprise automation capabilities or have an upcoming SAP automation project involving Power Automate, this playbook is for you.

[Get your copy of the playbook](#) today and start automating SAP GUI-based workloads with Power Automate.

Playbook highlights

Sample Use Case API & RPA based flows

To showcase our API- and UI flow-based automation capabilities, we've based the playbook on fictitious, easy-to-follow use cases, allowing you to instantly apply any learnings in your own environment.

Power Automate flows using API & UI based automation

Employee manually triggers an API flow either through a button or Power Automate Portal and provides the new address details

API based flow processes the information, reaches out to Azure Key Vault and starts a new UI flow with a set of input parameters

UI flow then uses its advanced RPA capabilities to automate the creation of new employee address in SAP

Finally, the API flow sends an email message to the requesting employee informing about the outcome

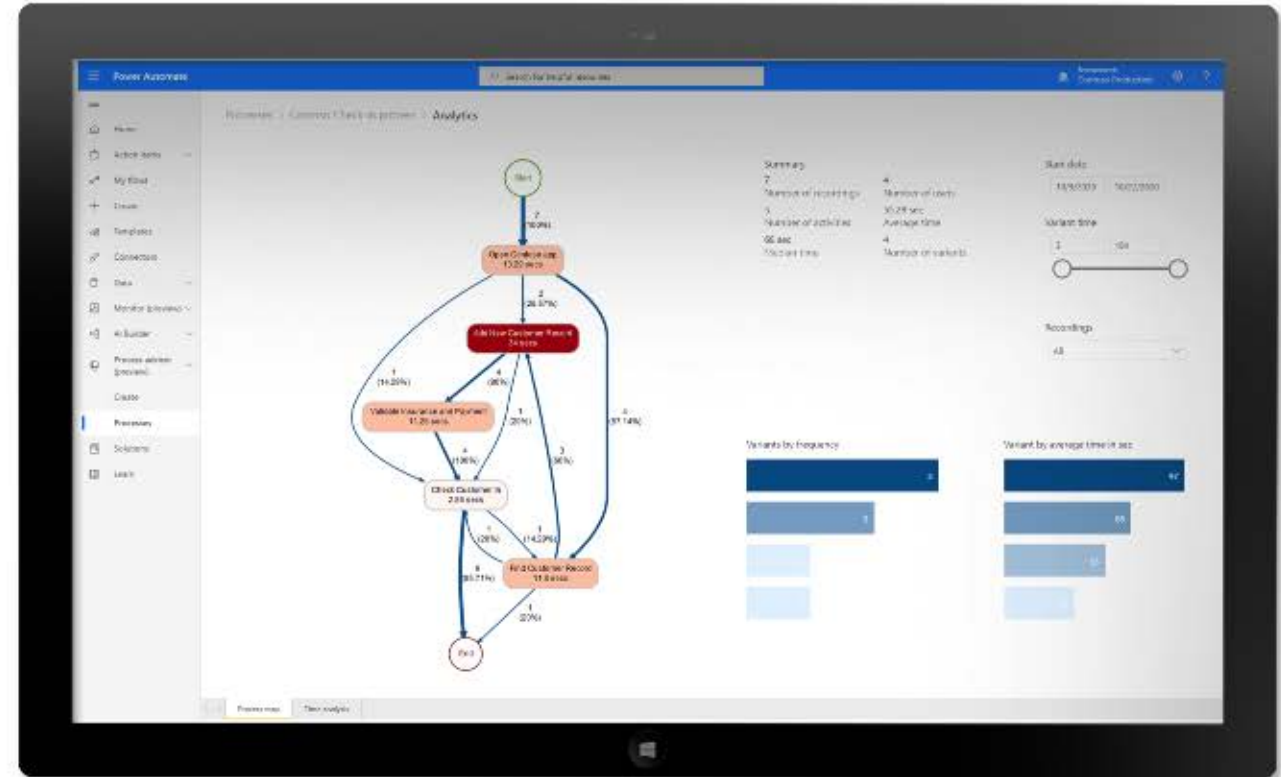

Process advisor

Process Mining for the Power Platform

Understand and improve processes

1. Run simple process recorders
2. Create rich process maps
3. Get in-depth analytics

Recommend applications, bots and workflows to improve the process

Developers

Pro Developers + Power Platform = No Limits

Every Developer (Low Code)

Pro Developer (Code First)

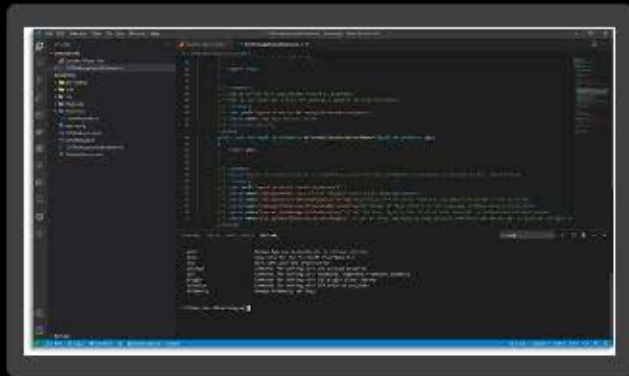

Visual Studio

VS Code

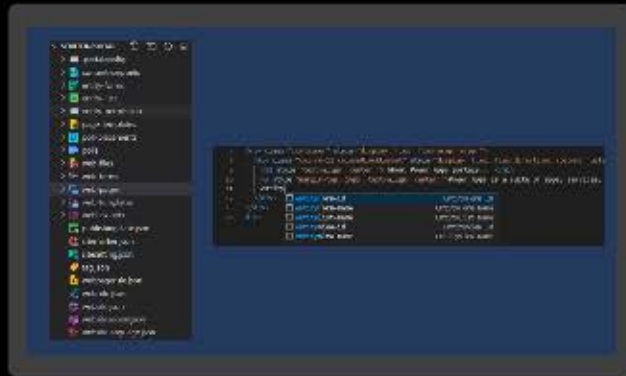

Power Platform Visual Studio extensions

Unlock the power of Visual Studio and Visual Studio Code with Power Platform

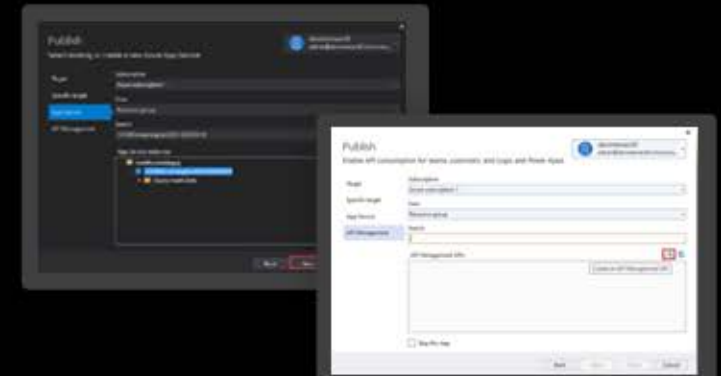

Extend directly from VS Code

The VS Code extension for Power Platform allows code first developers native extensibility for Power Platform CLI publication directly from VS Code.

Configure portals using VS Code

The VS Code extension for Power Apps portals adds the capability to configure portals using VS Code and CLI. IntelliSense is embedded for code completion, assistance and hinting while customizing portals.

Seamlessly publish your API

The Visual Studio extension for Power Platform means developers can publish APIs in Azure API management while deploying a Power Platform connector, removing barriers and friction.

Power Platform + GitHub

Develop, test, and deliver applications with GitHub Actions for Power Platform

Seamlessly manage solutions and environments

Empower developers to work within the tool of their choice by creating their own systems development life cycle (SDLC) workflows or use pre-configured templates with GitHub actions for Power Platform.

Enable everyone to contribute to CI/CD

Empower citizen developers to perform self-service continuous integration/ continuous delivery (CI/CD) to free up time for DevOps engineers and IT admins. With a full line of sight for IT admins and professional developers, users no longer need to worry about audience disconnection for combined environments.

Seamless Fusion teams

Create seamless Center of Excellence (CoE) team interactions by empowering citizen developers to trigger GitHub actions for Power Platform such as using Power Automate to construct CI/CD or build UX for self-service CI/CD using Power Apps.
